

VARIETIES

Jasperson Sod Premium Bluegrass

Jasperson Sod Premium Bluegrass is well suited for most Midwestern lawns. It is durable, winter hardy and beautiful. It survives well in full sun to part-shade and uses moderate amounts of fertilizer. Jasperson Sod Farm uses the best variety blends available for our area to ensure that you will have a lawn you can enjoy for years to come.

HGT (Healthy Grass Technology)

HGT is an improved seeded bluegrass developed by Barenbrug International. HGT stands for Healthy Grass Technology, and lives up to that name by demonstrating unmatched toughness and disease resistance. HGT was developed in harsh climatic conditions, specifically to withstand diseases, pests, and traffic. HGT is especially unique because of its ability to thrive where other bluegrass varieties struggle. It's applications are good for homes, sports fields, and golf courses.

Tall Fescue (June 2016)

Black Beauty™ produces a darker-green turf naturally. With improved disease resistance and drought tolerance, Black Beauty Grass redefines what a “green-lawn” is supposed to look like! The grass leaves possess an invisible waxy coating, very similar to what you’d find on an apple which helps to preserve moisture in the leaf and wards off stress from heat, cold, wind and disease. With roots that can grow up to four feet deep into the soil, it will improve any lawn that is sodded. This blend grows well in clay or sandy soils and in full sun or partial shade.
